

Stand With Me - GuatUp2017 Project Finale

Here's what the SWM team has been up to in their final two weeks in Guatemala.

Darline was our first patient in Guatemala to receive a standing frame. Now, two years later, she can walk and stand all on her own. Here she is standing next to her old stander.

Our goals

Stand With Me is working to provide physical therapy in the form of a standing frame to children with cerebral palsy in an affordable and accessible way.

In these past two weeks, we've interacted with over 60 families, gathering follow-up data from stander users and delivering new frames!

Give a Stander

At our home base in Xenacoj, we delivered over 20 standing frames to new patients over these past two weeks!

Chiquimula and Jocotán

We traveled to Adisa centers in Chiquimula and Jocotán and followed up with 10 patients and their families. We saw some of our first patients and taught Adisa's physical therapists how to use our frames and online forms.

Escuintla

Emily, Riley, Thomas, and Sergio traveled to Fundabiem Escuintla and followed-up with seven families in one morning! Every stander helped a child get stronger and more independent!

Santiago Atitlán

The team met with a few Adisa therapists in Santiago. There, they met with 20 patients in two days! We practiced using and refined our new follow-up forms with Adisa therapists.

Stander Design

We've updated our production process to make our workshop even more efficient. We expect to make 300 standing frames this year, but at a pace of over two a day instead of less than one a day! The only thing preventing us from making 600 per year is funding!
